

Alexei Verdes

WordPress Developer — Page Builders, Custom Development

alex_webdev@yahoo.com · github.com/alexpheX · cv-alex-online.app

PROFILE

Self-taught WordPress Developer comfortable across the full range of client work: fast, pixel-accurate builds with Elementor and deeper custom work in PHP and JavaScript — custom themes, Gutenberg blocks, and WooCommerce customization. Also building skills in REST API and webhook-based automation (n8n) to connect WordPress and WooCommerce with CRM systems.

Background in logistics shaped a practical, deadline-driven approach to client work. Looking to start a professional career as a WordPress Developer — ready to begin with builder-based work and site support, then grow toward custom development and automation projects.

TECHNICAL SKILLS

Page Builders	Elementor — responsive layouts, global styles, dynamic/custom widgets, third-party plugin integration
Gutenberg	Custom block development (block.json, InspectorControls, dynamic rendering) — examples published on GitHub
WordPress	Custom Theme Development, Custom Post Types & Taxonomies, Hooks & Filters, Template Hierarchy, Customizer API
PHP / JS	OOP PHP, WordPress Coding Standards, Secure Data Handling, Vanilla JavaScript (ES6+), AJAX
WooCommerce	Custom Product & Checkout Fields, Order Meta, Checkout Customization, Email Templates, HPOS Compatibility
Automation & Integrations	REST API (custom endpoints, auth, validation & sanitization), Webhooks, n8n workflows, CRM integrations (HubSpot, Pipedrive – <i>in progress</i>)
Dev Tools	Git, GitHub, DDEV, SCSS, npm

PROJECTS

Agency Theme — Custom WordPress Theme

- Built from scratch (no page builders) — CPT project with service_type taxonomy, archive/single templates, custom meta fields (client, year, URL) via native meta boxes with nonce validation and sanitized output.
- Native Gutenberg block ("Project Hero") registered via block.json; Customizer section with get_theme_mode() for hero content, accent color, and contact info; dual nav menus (primary + footer) — see github.com/alexpheX

Lead Capture Sync (*in progress*) — WordPress Plugin (WP → n8n → CRM)

- Custom OOP PHP plugin with Composer/PSR-4 autoloading and a layered architecture (Controller → Service → Repository) separating business logic from WordPress data operations.
- Built a REST API for lead creation (with validation) and a token-authenticated callback endpoint for external services to update lead status, plus a Contact Form 7 integration using the Provider pattern for easy extension to other form plugins.
- Implemented webhook-based sync to n8n/CRM with duplicate-lead detection and a status lifecycle (pending → processing → processed/failed); currently finalizing the n8n workflow and CRM integration — see github.com/alexpheX

Woo Agency Toolkit — WooCommerce Plugin

- Custom OOP PHP 8.2 extension using WooCommerce hooks/filters, with spl_autoload_register() for autoloading instead of manual requires.
- Added custom product/checkout fields ("Production Time," "Delivery Comment") with proper sanitization (absint()) and output escaping (esc_html(), esc_attr()), plus a custom admin order column and delivery comment display in order emails (HTML and plain text).
- Extended the orders list table and email templates via WooCommerce hooks; built for Classic Checkout, with Block Checkout support (WooCommerce Blocks API) identified as a next step — see github.com/alexpheX

Custom Gutenberg Blocks — GitHub

- A suite of 6 custom Gutenberg blocks with the WordPress Block API v3 (React + block.json) — see github.com/alexpheX
